# AICO

Perpendicular geometry and careful balance of volume.  
A spout that is only seven millimeters thick.  
A productive harmony where design meets technical excellence.

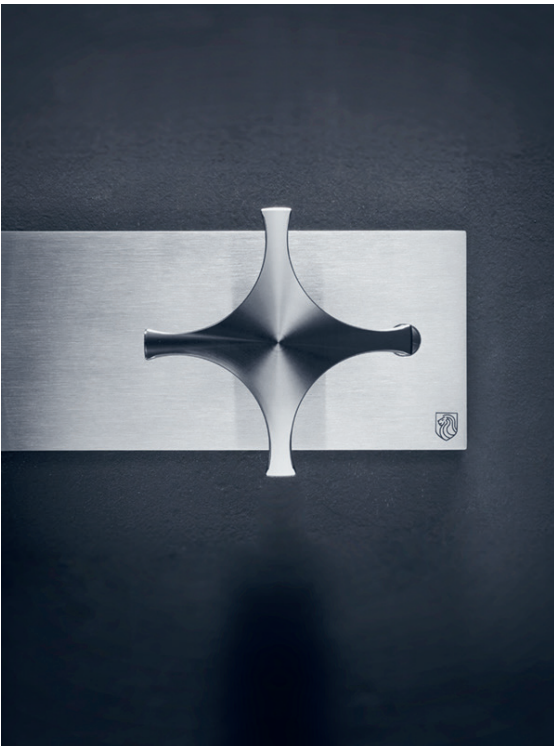

# DIXI

Neo-pop lines that remind of Keith Haring's New York.  
An iconic cross-shaped handle, for a contemporary  
and energetic collection.

# DORIN

A retro touch, for a line with an essential design  
made unique by the tradition of Venetian glassmaking art.  
Handles made of Murano glass available in amber and ice colors.

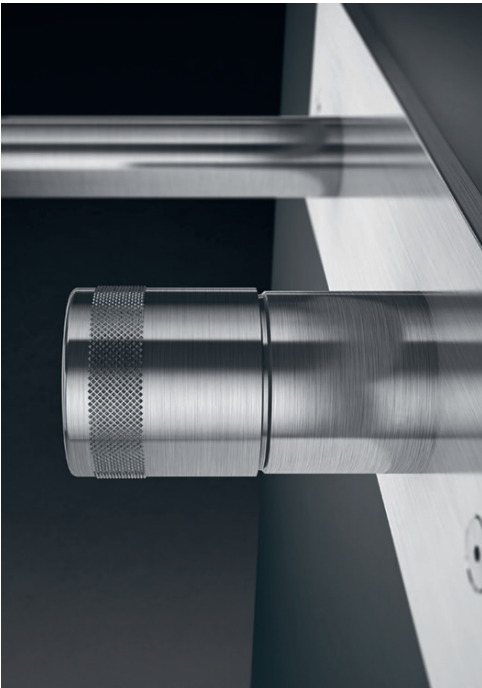

# HIRO

A singular expression. Different solutions.  
A refined bathroom design where Radomonte's style is  
tuned to the needs and personality of the individual customer.

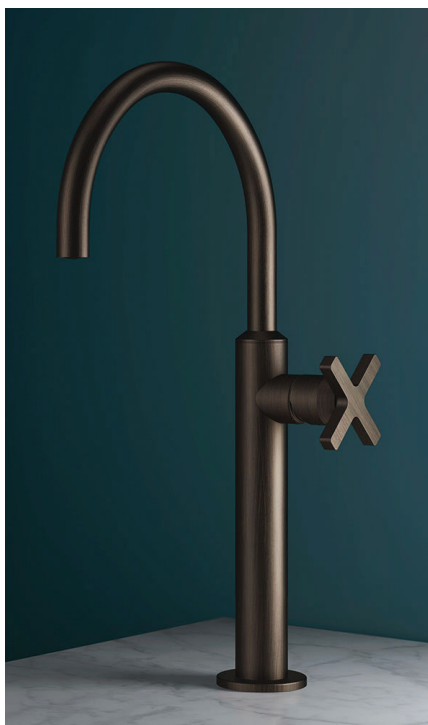

# HUGO

Hugo reinvents in contemporary style one of the most popular classic shapes, the cross-shaped handle. A collection where fluid lines find a breaking point in the shape of the handle, creating a contrast full of character.

Replace XX with: **DB**

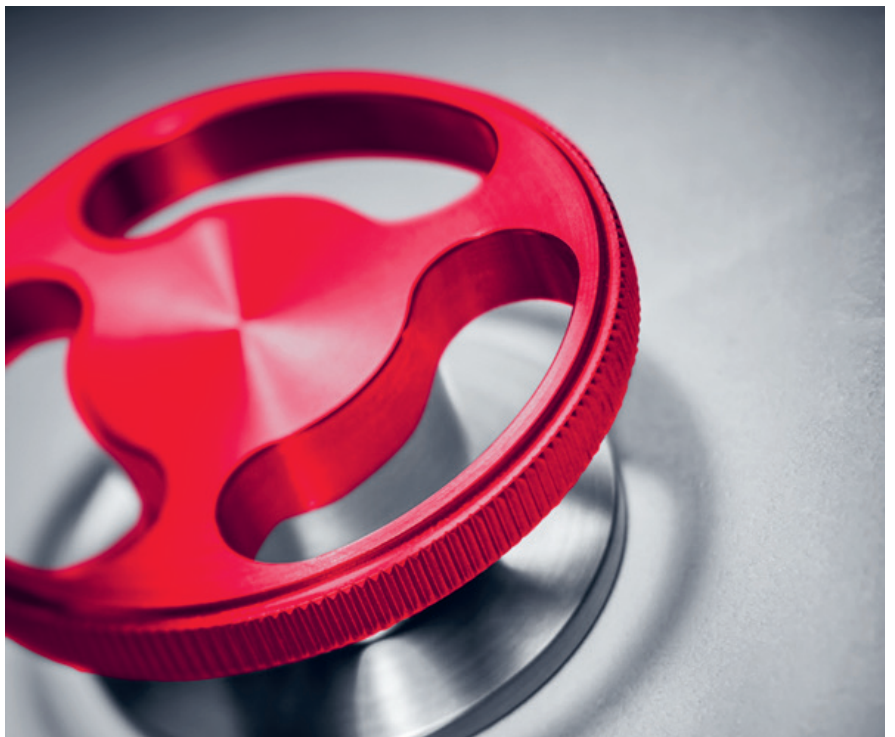

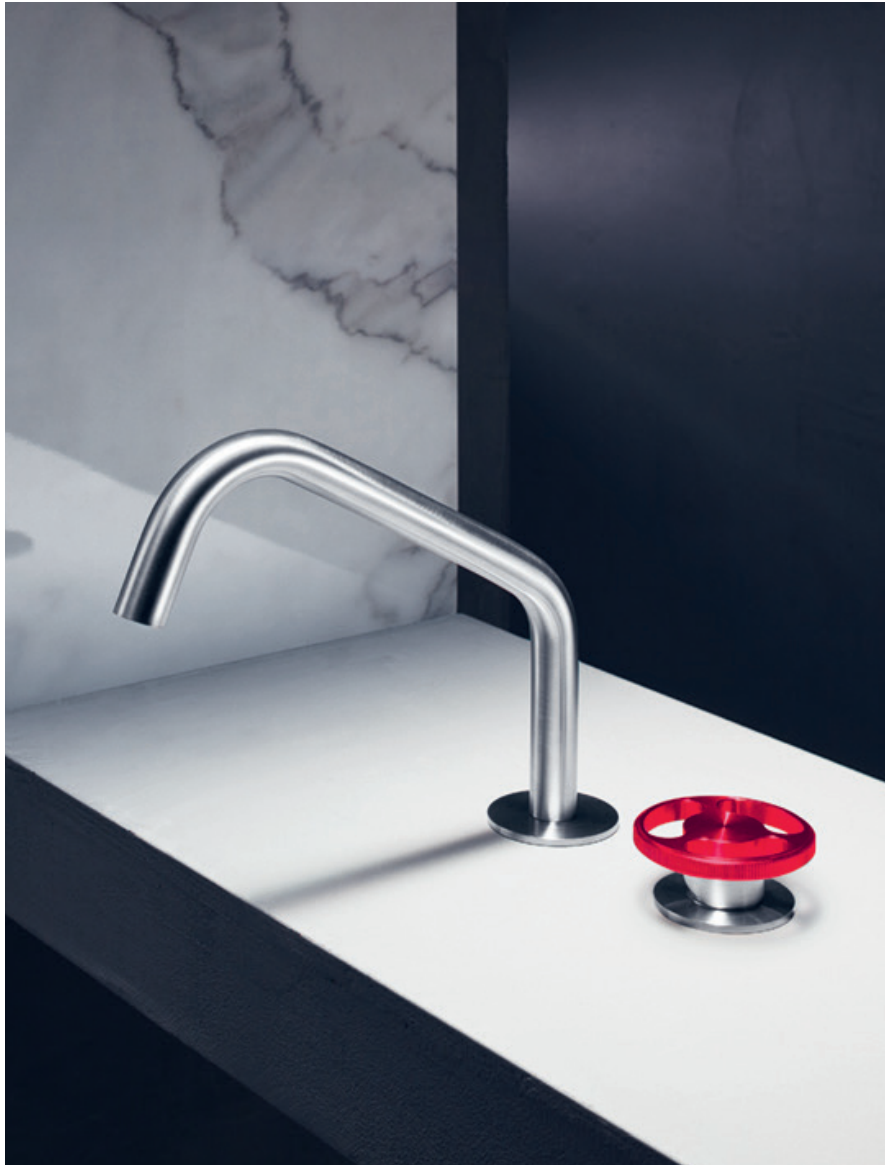

# KATO

The machinery, the gear.  
A steampunk inspiration and post-industrial style  
for an original and contemporary bathroom series.

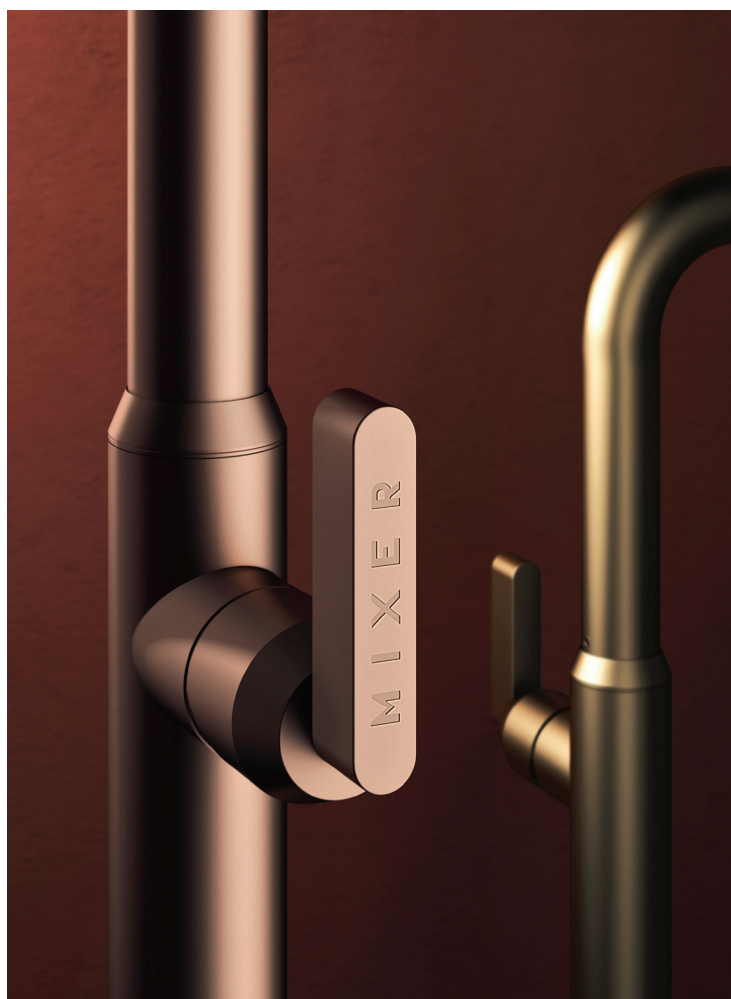

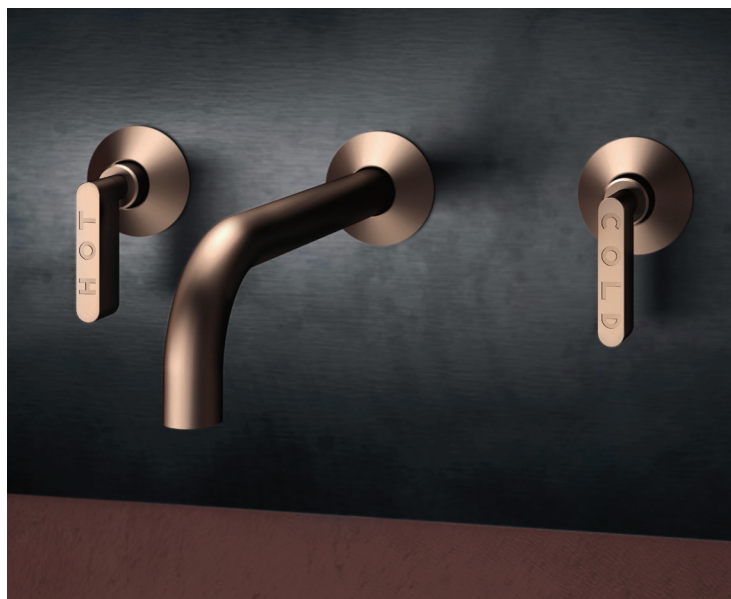

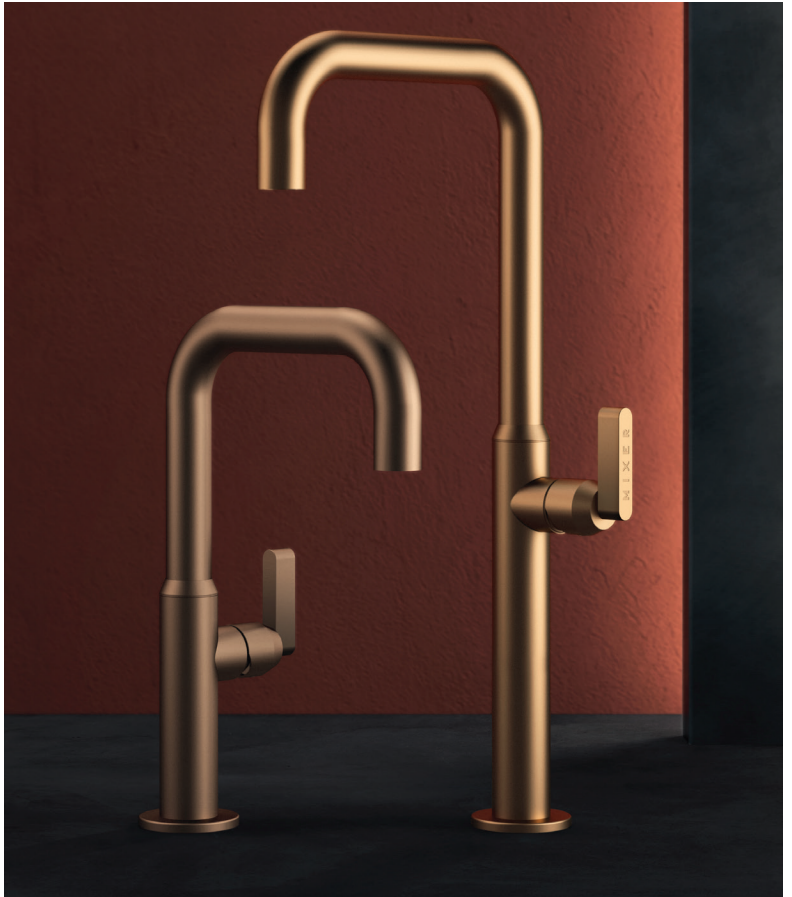

# KOE

Industrial style for of the novelties of the GEDA collections. The inspiration for Koè comes from the charm of the lofts in New York, with their intertwining exposed pipes. A detail of character is the engraved handle, which recalls the lever of an old style valve.

# MINIME

Sinuous lines and soft volumes. Minime is the GEDA collection that offers the greatest possibility of combinations between height and length of the spout. A modern design, to meet your needs and your personality.

Varnish - Satin gold  
Replace XX with: **MG**

# MIRO

The refined meeting between stainless steel and black Murano glass, for a refined and elegant bathroom series. The handles have different sizes for hot and cold water.

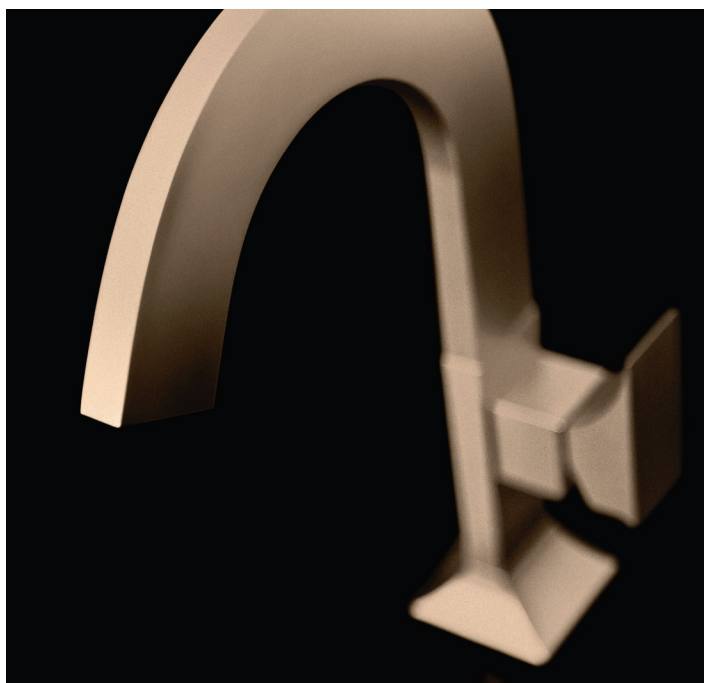

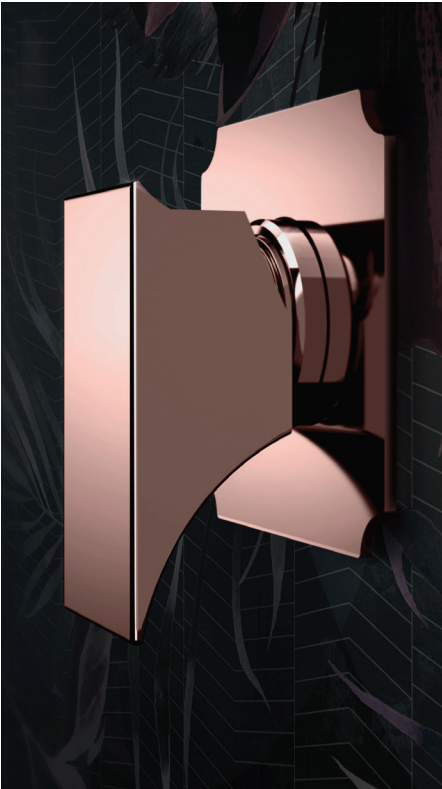

# RAJIA

Rajia is a bathroom series inspired by the exoticism of the distant India of the Maharajas. The classic style meets refined and precious lines, for a collection designed for the most sophisticated interiors. Luxury with a contemporary soul.

# WARRANTIES

---

1. This guarantee is extended to all countries where the product is sold by **GEDA srl** under the brand **Radomonte srl** or its authorized distributors and is applicable only to the equipment provided, used for purposes unrelated to any business or professional activity carried out by the customer.
2. **All warranty claims should be sent directly to the order desk at Streamline Canada Inc.**
3. To qualify for the warranty, the customer must present the original receipt of purchase, as well as a service receipt or an equivalent document stating faulty performance. If a product is already in use, and has been transferred to another user, the warranty begins on the date of delivery to the first customer. When making a warranty claim, all products must be delivered in their original packaging and with tubes and mounting kits properly wrapped as to not damage the equipment.
4. GEDA provides a 24 month warranty on all equipment from the date of delivery. GEDA mixer cartridges are guaranteed for a period of 10 years. In both cases, the guarantee is valid only if they have been fitted with wash basin filter (to be cleaned periodically) or at least when the hydraulic system is equipped with a central filter.
5. The warranty is valid only if the installation is carried out carefully following the directions and requirements found on the respective Radomonte/GEDA website. The warranty is void if components or other pieces of equipment have been modified.
6. Subject to the conditions listed below, GEDA will bear the transportation costs and materials needed to repair or replace equipment. The replacement, in whole or in part (even with similar products), can not be made if objectively impossible, or if it would present to GEDA unreasonable costs in relation to repair, keeping in mind the costs associated with replacement of equipment and inconvenience caused to the customer.
7. The warranty is excluded for defects of conformity resulting from causes not related to Radomonte by GEDA, such as:
  - Installation of equipment carried out in a different way from what is outlined in the assembly instructions or inadequate staff and/or tools;
  - Usage of equipment in other ways than those listed in the manual;
  - Poor or bad maintenance of equipment or its alteration or amendment;
  - Improper use of cleaning products;
  - Use of inappropriate cleaning products;
  - Use of non-original "Radomonte by GEDA" spare parts;
  - Shipping damage is not challenged within the terms of the law or resulting from unauthorized carriers;
  - Inefficiencies, or abnormalities of electrical and water system, in particular damages caused by scale or limestone deposits inside the pipes;
  - Cases due to the influence of chemicals, electrochemical, electrical and electronic equipment for their use or improper installation by anyone unskilled or otherwise for the installation;
  - Frost and weather, lightning, fire, extreme weather events and natural disasters;
  - Abnormalities of any kind that are not caused by defects of equipment conformity.
8. Not covered under warranty: the cost of the equipment or the implementation of changes to adapt or to develop according to local or national regulations concerning security, where such rules go beyond the EU harmonized standard; damages from misuse of the equipment; ending profits and damages of any nature and consequential; damages caused by using non-original Radomonte by GEDA accessories; parties who are subject to normal wear and tear (aerators, o-rings, valves, batteries, filters, headworks open / close, cartridges in the absence of the taps of filter / joint).
9. The customer loses the right to enforce this warranty if repairs or modifications have been attempted by themselves, or other persons with inadequate skill.
10. The requests and the services provided under this warranty do not extend the original warranty period, except is stated by the rules of prevailing national law.
11. When the warranty runs out, all services and equipment will be available at market rates, unless the model has been discontinued.
12. The actions outside the warranty will always be subject to creditors, under which the customer can decide whether to proceed or not. This does not compromise the mandatory rights of the client law.

Please contact **Streamline Canada Inc.** for all Warranty claims, and not Radomonte by GEDA, unless otherwise advised to do so.

# CLEANING & MAINTENANCE

---

In general, it's enough to wash with soap and water, rinse thoroughly with water, and dry with a cloth. Excellent results are obtained by washing stainless steel surfaces in warm water with regular dish washing detergent. It thereby maintains the brilliant look. Drying is particularly important for those areas where water has high hardness and leaves deposits. On the brushed finishes, wipe along the brush and not across.

## SCALING

To remove lime deposits, left by the water, use a mild detergent cream with a soft cloth.

Thicker deposits can be removed by soaking in a solution of hot water and vinegar  $\frac{1}{4}$ .

Rinse thoroughly with a solution of water and sodium bicarbonate and then with clean water.

Dry thoroughly.

**Never use soap spray directly on the product**, first spray on a cloth or sponge.

**Do not use abrasive cleaners or powders** that could ruin the aesthetic appearance of the surface (such as satin finish).

**Do not use cleaning silver.**

## OIL STAINS AND GREASE

Use a mild dishwashing liquid or a mild detergent in hot water. Rinse thoroughly with clean water and dry with a cloth. For stubborn stains you can use ethanol, acetone or other nonhalogenated solvent.

## IMPRINTS

Use a mild detergent or dishwashing liquid or, alternatively, wipe gently with a soft cloth (example microfiber) and a glass cleaner.

## SCRATCHES

Apply a cleaner / polish, suitable for stainless steel using a soft cloth.

## RUST STAINS (CONTAMINATION)

Rust stains may not come from corrosion of stainless steel, but by objects (cans, utensils for daily use, etc..) in Steel left for a long time on the surface of steel or iron particles that can be transferred. To remove them, use a cream cleanser using a soft cloth and rub gently. If the stain persists, you may need to apply a product specifically for pickling and passivating stainless steel.

In any case do not use:

- scouring pads, brushes or abrasive disks made from other metals and alloys (example mild steel, aluminium, brass, etc.) or utensils that have previously worked or clean other metals or alloys, which will scratch the surface and cause the contamination, causing unsightly stains.
- hydrochloric acid (commercial muriatic) and bleach. It's also good to avoid contact with fumes from hydrochloric acid, for example, washing the floors with bleach. In general you should avoid direct use of detergents containing chlorides on stainless steel, unless you provide short contact times and a generous final rinse.
